NEBRASKA
DEPARTMENT OF HEALTH
BUREAU OF VITAL STATISTICS

1983 ANNUAL STATISTICAL REPORT

ROBERT KERREY

GOVERNOR

Gregg F. Wright, M.D., M.Ed.
Director of Health

Stanley S. Cooper, M.S., Ph.D.
Director, Bureau of Vital Statistics

Report Prepared by:

Division of Health Data and Statistical Research
Mary Lou Eastman, M.S., Director

FOREWORD

Nebraska statute requires that records of birth, death, fetal death, marriage, and divorce be filed with the Bureau of Vital Statistics of the Department of Health. Approximately 60,000 records of vital events occurring in Nebraska are filed annually, and are added to the nearly five million such records already on file. Over 105,000 certified copies from those records are issued each year.

Responsibility for filing certificates of birth lies with the individual in attendance at birth, usually a physician. Funeral directors are responsible for filing certificates of death and of fetal death when burial takes place. Hospitals are to file fetal death certificates when hospital disposal is performed. County judges and district court clerks are, respectively, responsible for filing records of marriage and divorce.

The excellent cooperation of all the individuals mentioned is appreciated, and permits development of the tabulations presented in this report. Providing useful data stands as the goal of this report, and any questions or comments regarding the report, or requests for more detailed information, should be directed to:

DEATH SECTION

Death Overview. 34-36

Health planning regions 37

Deaths by place of occurrence and by usual residence of deceased for health planning regions, 1981-1983, rate for 1983 38

Deaths by place of occurrence and by usual residence of deceased, 1981-1983, rate for 1983. 39-42

Average age at time of death, male and female, 1983 42

Deaths, sex and race by place of residence, 1983. 43-46

Graph, average age at time of death, 1925-1983. 47

Chart, deaths, ten leading causes by percentage, 1983 48

Leading causes of death by selected age groups and sex, 1983. . . . 49

Six leading causes by age group and sex, 1983 50

Six leading causes, age specific rates, 1983. 50

Six leading causes of death by place of residence, rates, 1983. .51-54

Principal and other causes of death by place of residence, heart, cancer, cerebrovascular, accidents, pneumonia, chronic lung disease, atherosclerosis, diabetes mellitus, suicide, nephritis and nephrosis, and congenital anomalies, 1983 55-59

Black deaths by leading cause and sex, 1983 60

Black deaths, hospital and nonhospital, infant, number and rate, 1983. 60

Principal and other causes of death, 1979-1983. 61

Principal and other causes of death, rates, 1979-1983 62

Cancer deaths by site and sex, 1979-1983. 63

Cancer deaths by site, rates, 1979-1983 64

Principal and other causes of accidental deaths by place of residence, motor vehicle, farm, falls, drowning, and fire, 1983 . . .65-68

Accidental deaths occurring in Nebraska by type of accident and age group, 1983 69

Accidental deaths by cause, 1979-1983 70

TABLE OF CONTENTS

Page

Drownings by site, sex, and age group, 1983 71

Farm fatalities by type, sex and age group, 1983. 71

Suicides by type, sex and age group, 1983 72

Hospital and nonhospital deaths by occurrence and residence, 1983. 73-76

Graph, neonatal and infant deaths, 1925-1983. 77

Deaths under one year of age by cause, sex, race, birth weight, and rate, 1983. 78

Infant, neonatal, perinatal and fetal deaths by place of residence, number and rate, 1983. 79-82

Fetal deaths by cause of death, 1983. 83

Fetal deaths by month, age group of mother, sex, race and place of delivery, 1983 84

MARRIAGE AND DIVORCE SECTION

Marriage and Divorce Overview 85-86

Marriages by county, number and rate, 1980-1983 87-88

Residents married by county, rate, 1983 89

Marriages by education of bride and groom, 1983 90

Marriages by race, bride and groom, 1983. 91

Number of marriages, bride and groom, 1983. 91

Marriages by residence status, bride and groom, 1983. 92

Previous marital status, bride and groom, 1983. 92

Marriages by non-resident bride and groom, 1983 93

Number of marriage by age of bride and groom, 1983. 94

Chart, marriages by age of bride and groom, 1983. 95

Chart, first marriages by age of bride and groom, 1983. 96

Marriages by occupation of bride and groom, 1983. 97

Graph, marriages and divorces by rate, 1925-1983. 98

Divorces by county, number and rate, 1980-1983. 99-100

INTRODUCTION

The information presented in this report is drawn from the vital records of the State of Nebraska. Records of events which occur in other states for Nebraska residents received through an Interstate Exchange Agreement are also utilized. The primary period covered is calendar year 1983, but selected data from previous years are also included. Data from 1983 records received after April 1, 1984 by the Bureau of Vital Statistics are not included in the tabulations in this report. However, the number of such records is minimal and their statistical effect negligible.

The congenital anomaly data presented in the report are taken from the Nebraska Birth Defects Registry, with the exception of the death data. Information for the Registry is provided by reporting personnel in approximately 100 Nebraska hospitals.

The state population figure used in the calculation of rates is 1,597,000, the 1983 estimate published by the United States Bureau of the Census. County, city, and balance of county populations used are Health Department estimates. U.S. vital event data, presented for comparative purposes, are provisional and are from the National Center for Health Statistics.

Characteristics of the population, such as its size and its age structure, can bear a great influence on vital statistics data. Only 30 counties and 12 cities in Nebraska had populations over 10,000 at the 1980 Census. Nine counties had less than 1,000 residents. In any area with a population under 10,000, wide variations in numbers or rates of events can appear from year to year, and no single year may be truly representative of the population. Counties with a high proportion of young people will show relatively higher birth rates and lower death rates than counties with greater numbers of older residents.

Information for towns having populations of 2,500 or more are included in this report, but information is available for towns where populations are 1,000 or more persons.

NEBRASKA BIRTHS, DEATHS, MARRIAGES AND DIVORCES

BY NUMBER AND RATE PER 1000 ESTIMATED POPULATION

YEAR	ESTIMATED POPULATION	BIRTHS	RATE	DEATHS	RATE	MAR-RIAGES	RATE	DI-VORCES	RATE

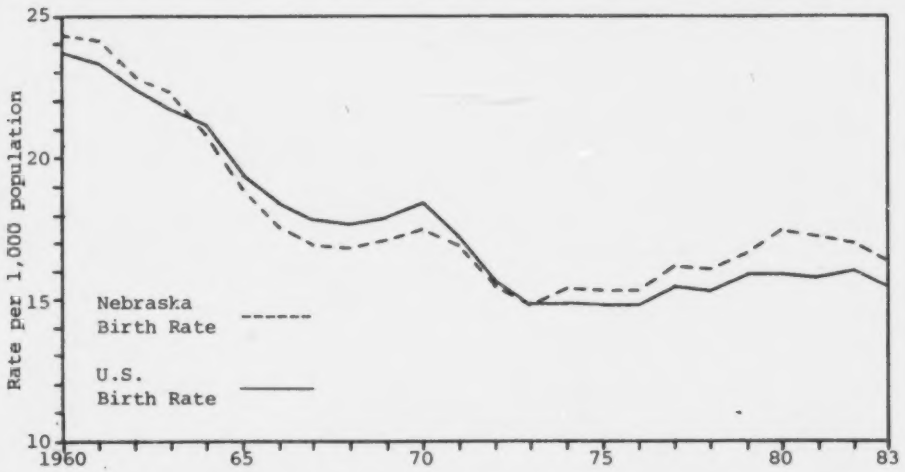
BIRTH OVERVIEW

Nebraska resident live births declined for the third consecutive year, continuing a trend which will probably extend to the end of the century. The number declined by 2.6% from 26,954 in 1982 to 26,254 in 1983. Nationally, the fertility rate decreased to 65.4 live births per 1,000 women aged 15-44 in 1983 from 67.8 in 1982. Nebraska's estimated fertility rate dropped to 72.6 in 1983 from 75.0 in 1982.

The crude birth rate dropped from 17.0 per 1,000 population in 1982 to 16.4 in 1983; a 3.5% decrease in rate. The United States rate also decreased, to 15.5 in 1983 from 16.0 in 1982. A comparison of Nebraska and United States rates for a twenty-three year period is shown in the graph below. Though Nebraska's rates have been both higher and lower than the national rates, their trends are similar.



Rates for counties within the State ranged from a high in Thurston County of 25.1 to a low of 7.9 in Arthur County. Rates for towns over 2,500 population ranged from a high in Scottsbluff of 20.6 to a low of 11.0 in Central City.

Most Nebraska births continue to occur in hospitals and are attended by physicians. In 1983 there were 108 (0.4%) births not reported as occurring in hospitals. This percentage has remained the same for three years. The percent of births not attended by a physician declined to 0.9%. While the numbers are small, this is the first decline since 1978.

The educational level of both mothers and fathers is continuing to increase. The following table shows percentages for known cases. (The number of unknown cases is higher for fathers than mothers because the item is generally not reported on certificates of out-of-wedlock births, but trends should not be significantly affected.)

	MOTHER					FATHER				
EDUCATION	1970	1975	1980	1982	1983	1970	1975	1980	1982	1983
≤12 yrs.	81.6%	83.7	86.4	87.4	87.9	84.7%	88.7	90.6	91.4	91.8
≤16 yrs.	9.6%	14.0	16.1	17.2	18.0	18.6%	23.3	24.3	24.5	25.2

White births accounted for the same percent of births as in 1982, 89.7%. The trend over the last several years had been for this percentage to decline. Douglas County had the largest share of the non-white births, 52.4%, followed by Lancaster and Sarpy with 10.9% and 8.1% respectively.

The occurrence of multiple births, for the total number of births, was slightly over the average for the last ten years, but lower than 1982.

For the first time since 1973 the number of out-of-wedlock births declined. It was only a small decrease, 1.2%, and not enough to keep the rate from continuing to increase. However, the rate had a fairly small percentage of increase, 1.3%, compared to increases of 6.1% and 3.6% in 1982 and 1981 respectively. The number and rate of all births decreased between 1983 and 1982 by 2.6% and 3.5% respectively. While the percentage of white births which are out-of-wedlock is much smaller than it is for non-white, it is increasing steadily, changing from 6.0% in 1973 to 9.9% in 1983. The percentage of out-of-wedlock births accounted for by each race and the percentage of births for each race which were out-of-wedlock are shown in the following table.

	PERCENT OF OUT-OF-WEDLOCK BY RACE		PERCENT OF RACE OUT-OF-WEDLOCK	
	1983	1982	1983	1982
White	68.5	68.0	9.9	9.6
Black	22.5	22.6	57.5	57.5
Indian	5.2	5.1	53.0	53.5
Mexican	3.5	4.0	15.9	17.6
All Other	0.4	0.4	3.9	4.0

Historically, teenagers have accounted for the largest share of out-of-wedlock births; however, in 1983 the 20-24 age group is nearly equal to the teenage group. The percentage distributions by age groups of mother for out-of-wedlock births and all births for five years are in the following tables.

OUT-OF-WEDLOCK BIRTHS

AGE	1979	1980	1981	1982	1983
<20	43.5	45.6	42.1	40.0	39.0
20-24	38.1	36.1	39.0	37.3	38.9
25-29	12.5	12.3	13.0	15.1	15.0
30+	5.9	5.9	5.8	7.6	7.0

ALL BIRTHS

AGE	1979	1980	1981	1982	1983
<20	11.6	12.1	11.3	10.5	10.0
20-24	34.9	34.8	34.5	33.8	33.3
25-29	35.2	34.4	34.5	34.8	34.0
30+	18.3	18.8	19.8	21.0	22.6

A combination of changes in number of persons in the age groups and fertility levels are causing the changes in the distributions in the tables above. For all births, the 30 and over group has shown the greatest change. The next two tables also give evidence of the effects of delayed child-bearing and population distribution changes.

AVERAGE AGE OF MOTHER

AGE	1970	1975	1980	1982	1983
1st born	21.4	22.1	22.7	22.9	23.3
2nd born	24.2	24.7	25.4	25.7	25.9
3rd born	26.8	27.3	27.6	27.7	28.4

MOTHER'S AGE RANGE FOR BIRTH ORDER AVERAGES BY YEAR

	1.00 - 1.99	2.00 - 2.99	3.00 - 3.99	4.00 - 4.99	5.00+
1970	13 - 23	24 - 27	28 - 31	32 - 36	37+
1975	12 - 25	26 - 31	32 - 34	35 - 38	39+
1980	13 - 25	26 - 32	33 - 37	38 - 41	42+
1982	13 - 25	26 - 33	34 - 38	39 - 40	41+
1983	13 - 25	26 - 34	35 - 38	39 - 43	44+

The average number of pregnancies per woman having a live born child in 1983 increased to 2.4 from 2.3 in 1982. The average number of live born children per woman having a live born child in 1983 remained at 2.1. The frequency of high

order births (here defined as five or more) has continued to decrease in the 1980's after rapid decrease during the 1970's. The number of high order births in 1970, 1975, 1980, and 1983 was 2655, 1238, 1005, and 964 respectively.

Low birth weights occurred in 5.4% of the births, down slightly from 5.5% in 1982. Births of ten or more pounds occurred 2.0% of the time, unchanged from 1982. Prenatal care began in the first trimester of pregnancy in 79.8% of the births, an increase from 78.9% in 1982. The percent of mothers who had at least ten prenatal visits also increased to 67.5% from 65.4% in 1982. The percent of mothers who had no prenatal care remained at 0.5%.

There were 633 Nebraska resident births in 1983 on which congenital anomalies were reported to the Birth Defects Registry by June 1, 1984. This figure represents 2.4% of the 26,454 live births and fetal deaths, a decrease from the 2.6% reported in 1982.

A much higher proportion of the congenital anomaly cases were of low birth weight than the overall live births; 18.3% as compared to 5.4%. Sixteen cases were stillborn at 20 or more weeks of gestation, representing 8.0% of the fetal deaths. Only one congenital anomaly was reported on 478 of the cases, while 89 had two, 26 had three, 16 had four, and 24 had five or more congenital anomalies noted.

Nebraska births in 1983 occurred at a rate of one every 20.0 minutes, or 71.9 per day. More births occurred in July (2,369) than in any other month while the fewest occurred in February (1,982).

Jennifer was the most popular name for girls for the fourth consecutive year. John replaced Michael as the most popular name for boys.

Out-of-State: A Nebraska resident giving birth or dying outside of Nebraska.

Non-Resident: A non-Nebraska resident giving birth or dying in Nebraska.

DEATH OVERVIEW

An increase occurred in the number of deaths in 1983, 0.9%, but the crude rate was unchanged at 9.2 per 1,000 estimated population. The rate has been at 9.2 since 1977 except in 1979, when it dropped to 9.0. Nationally, the picture was similar with the number of deaths increasing, but the rate remaining at 8.6.

Within the state, county death rates ranged from a high of 18.7 in Garden County to a low of 2.2 in Banner County. Rates for towns over 2,500 population ranged from a high of 23.6 in Ord to a low of 1.9 in LaVista. The low position has been held by LaVista all through the 1970's and 1980's, probably because of its young population. The ranges in rates for both the counties and cities broadened this year.

The ten leading causes of death are the same in 1983 as they were in 1982. Pneumonia and Diabetes Mellitus, though they did not change position, showed quite large increases. Pneumonia increased 20.5% and Diabetes Mellitus increased 22.9%. It is not unusual for Pneumonia to have substantial changes from year to year. The change in Diabetes is more unusual and may be more an indication of change in reporting accuracy than real change in the disease. An increase in Diabetes occurred nationally as well. Altogether, the ten leading causes of death accounted for a smaller percent of all deaths, 83.3%, than in 1982 when it was 84.5%.

Heart Disease, the leading cause of death, decreased by 1.9% after having increased the previous three years. There was also a substantial decline in the rate. The rate for the United States continued a slow decline for the third year.

The second most frequent cause of death, Cancer, also showed a slight decrease (0.8%) and the rate remained below the national rate. Bronchus and Lung is the most common site and the total remained essentially unchanged. However, the number for males declined to the lowest number since 1976 while the number for

females continued to increase. The number of Bronchus and Lung cancer deaths for females has doubled over the last ten years. For the Large Intestine, the second most frequent site, the number increased but Other Digestive Organs decreased so that the two about off-set each other. Death rates per 100,000 estimated population for Heart Disease and Cancer in Nebraska and the United States are shown in the following table.

	HEART DISEASE		CANCER	
YEAR	NEBRASKA	UNITED STATES	NEBRASKA	UNITED STATES
1974	370.4	351.6	172.3	169.4
1975	356.7	338.6	179.1	174.4
1976	352.9	338.5	169.9	174.9
1977	337.9	331.6	182.0	178.4
1978	348.4	333.0	188.2	181.9
1979	348.2	330.2	184.0	183.9
1980	349.8	335.2	188.0	186.3
1981	357.5	329.5	187.5	184.3
1982	361.0	326.9	187.6	188.6
1983	351.7	326.3	184.8	188.6

Cerebrovascular Disease, the third leading cause of death, increased slightly for the second year, 1.7%, giving a rate of 86.5. The national rate continued to decline from 68.8 in 1982 to 66.7 in 1983.

Accidents showed another fairly large decrease, 8.6%, though they are still the fourth leading cause of death. Motor Vehicle Accidental deaths remained about the same. Several categories had changes, but Falls and Injury by Fire were major contributors to the reduction this year.

The leading cause of death for males under age 40 is Accidents, then Heart Disease takes the lead. For females, the leading cause of death under age 30 is Accidents, then, in 1983, Heart Disease takes the lead for ages 30-34 with the more usual Cancer being the most frequent cause for ages 35-69. Heart Disease becomes the leading cause of death for females at age 70.

The average age at time of death continued its upward trend. Overall, the average age is 72.5 years, up one-half year from 1982. The increase was nearly all caused by the increase that occurred for females. The male average also increased from 69.1 in 1982 to 69.3 in 1983 but was overshadowed by the female

increase to 76.1 from 75.3 in 1982. The oldest Nebraskan dying in 1983 was a woman of age 106. The total number of persons who died at the age of 100 or more years decreased from 83 in 1982 to 76 in 1983. There were 22 males and 54 females in 1983 who were at or past the century mark.

MATERNAL, INFANT, AND FETAL DEATHS

A milestone was reached for maternal deaths in 1983. There were no deaths which, as reported, were classified as maternal. This is the first time that there have been no maternal deaths though the number was as low as one in 1973, 1980, and 1982.

Infant deaths decreased by 4.1% to 258 from 269 in 1982. The rate also declined to a new low of 9.8 per 1,000 live births. The national rate, while it is higher than Nebraska's, also declined. A comparison of the state and national rates is shown in the table below.

YEAR	NEBRASKA NUMBER	NEBRASKA RATE	UNITED STATES RATE
1979	304	11.6	13.0
1980	314	11.5	12.5
1981	268	9.9	11.7
1982	269	10.0	11.2
1983	258	9.8	10.9

The infant death rate for whites increased for the second year to 9.8, even with the state rate, while the nonwhite rate had a dramatic decline to 9.6 and is lower than the white rate. The rates for Blacks and Indians both increased so the other races caused the overall decline. However, small numbers which are subject to chance are involved here. Neonatal deaths, those occurring in the first 27 days of life, declined by 8.2% after an 11.5% increase in 1982. The older infant deaths increased slightly. Fifty-seven percent of the infant deaths were of low birth weight and 33.7% of them were under 2 lbs. 4 ozs.

Fetal deaths dropped 14.2% to a new low number of 200 and a new low rate of 7.6 per 1,000 live births.

MARRIAGE AND DIVORCE OVERVIEW

Nebraska marriages showed a fairly substantial decrease both in number and rate between 1982 and 1983, dropping to a total of 13,703 from 14,350. The marriage rate per 1,000 population declined to 8.6 from 9.0 in 1982. The United States rate also decreased but remained higher than the Nebraska rate, with the national figure for 1983 at 10.5 compared to 10.8 in 1982.

Marriage data are generally presented based upon the number of marriages occurring in a given area. Through an exchange of records with other states (in situations where Nebraska residents are married outside the state), it is possible to produce marriage data based on the county of residence. Although the exchange is not complete, the resident data are believed to be complete enough to be useful. In 1983, resident county marriage rates in Nebraska ranged from a low of 1.7 marriages per 1,000 population in McPherson County to a high of 21.3 in Hall County. The state resident marriage rate decreased to 17.0 from 17.7 in 1982.

The most frequent ages at marriage in 1983 were 21 for brides and 22 for grooms. Though 22 has been the most frequently reported grooms' age since 1978, the age for brides has increased from 19 since 1980.

The percent of marriages which were the first for both bride and groom increased slightly to 61.7% from 61.2% in 1982. At the same time, the percent of marriages which were the first for neither bride nor groom decreased from 19.0% to 18.7%. The following table presents the trend in first marriages for the past five years.

YEAR	FIRST MARRIAGE FOR BOTH PARTNERS	PERCENT OF ALL MARRIAGES
1979	8,991	63.9
1980	9,042	63.5
1981	8,894	61.9
1982	8,777	61.2
1983	8,449	61.7

Residents of several foreign countries and every state except Vermont were married in Nebraska in 1983. Both bride and groom were Nebraska residents in 88.5 of the marriages; neither was a resident in 4.6%.

June, traditionally the most popular month for marriages, remained so in 1983, with a total of 1,786. January was again the least popular month with 647 marriages.

Nebraska divorces decreased by 2.9% in number to 6,172, while the rate also declined to 3.9 from 4.0. Though Nebraska's divorce rate is lower, the decrease in rate paralleled that of the United States, which dropped from 5.1 to 5.0. The divorce rate in Nebraska had been increasing for many years, reaching a peak of 4.3 in 1981, but has now decreased for two consecutive years.

The most frequently reported ages at divorce were 25 for women and 26 for men. This age has varied considerably more for men than for women.

More marriages ended after only one year of marriage than any other length of time, and 39.0% of the 1983 Nebraska divorces occurred less than five years after marriage. This percentage has increased slightly for the past two years.

Continuing a downward trend, 64.2% of the divorces were ending the first marriage for both partners. At the opposite end, both divorcing partners had been married more than once in 16.9% of the cases, extending an upward trend.

Some type of settlement was granted in 88.6% of the 1983 divorces. A combination of child support and property settlement was most common, followed by property settlement alone. Child support was granted in 81.3% of the divorces in which children under 18 were affected. Of the total divorces, 62.7% affected children under 18.

POPULATION OVERVIEW

The United States Bureau of the Census estimated the population of Nebraska for 1983 to be 1,597,000, an increase of 0.7% over the 1982 total of 1,586,000.

The table below shows natural increase (the excess of births over deaths) and net migration for Nebraska for each decade since 1930 and for the beginning of the current decade.

DECADE	NATURAL INCREASE	NET MIGRATION
1930-1940	112,471	-174,600
1940-1950	139,270	-129,594
1950-1960	201,518	-115,698
1960-1970	147,200	- 73,197
1970-1980	97,420	- 12,928
1980-1983	36,530	- 9,355

Nebraska has consistently experienced out-migration over the period shown, but it had been decreasing steadily. However, if population estimates hold true, it appears that out-migration may be picking up again during the 1980's.

Population projections for Nebraska are available from the Bureau of Business Research of the University of Nebraska-Lincoln. County and town estimates used in rate calculation in this report were developed by the Health Department for that purpose. County estimates for 1983 will be available at a later date from either the Bureau of Business Research or the U.S. Bureau of the Census.

Population counts by age are available only for Census years, and the graphic on the facing page shows Nebraska's population in 1980 distributed by age and sex. The large proportion of the population born during the 'baby boom' years, as well as the large proportion of elderly, are evident.

DEFINITIONS

BIRTHS

BIRTH ORDER - The number of live born children including the current birth.

BIRTH RATE - The number of live births per 1,000 population.

FERTILITY RATE - The number of live births per 1,000 females 15-44 years of age.

LENGTH OF PREGNANCY - The duration of gestation, in completed weeks, as calculated from the first day of the last normal menses to the date of birth.

LIVE BIRTH - The complete expulsion or extraction of a product of conception from its mother, irrespective of the period of gestation, which, after such separation breathes or shows any other evidence of life such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles, whether or not the umbilical cord has been cut or the placenta is attached and is reportable,

LOW-WEIGHT BIRTH - A live born infant weighing 5½ pounds or less.

OUT-OF-WEDLOCK BIRTH RATE - The number of out-of-wedlock births per 1,000 live births.

SEX RATIO - The number of male births for each 1,000 female births.

DEATHS

DEATH RATE - The number of deaths from all causes per 1,000 population.

FETAL DEATH - Death prior to the complete expulsion or extraction of a product of conception from its mother, irrespective of the duration of pregnancy. Until the pregnancy has reached 20 weeks duration, it is not required that such a death be reported.

FETAL DEATH RATE - The number of fetal deaths per 1,000 live births.

INFANT DEATH - Death of a person under age one year.

INFANT DEATH RATE - The number of infant deaths per 1,000 live births.

MATERNAL DEATH - Death attributable to delivery or the complications of pregnancy, childbirth or the puerperium.

MATERNAL DEATH RATE - The number of maternal deaths per 100,000 live births.

NEONATAL DEATH - Death of a person under 28 days of age.

NEONATAL DEATH RATE - The number of neonatal deaths per 1,000 live births.

PERINATAL DEATHS - Fetal deaths plus neonatal deaths.

PERINATAL DEATH RATE - The number of perinatal deaths per 1,000 live births plus fetal deaths.

RESIDENCE - A person's usual place of abode. This means, in general, the place where one lives and sleeps most of the time. However, when usual residence is in a nursing home or other institution, residence is considered the place where the person lived prior to admission to the institution.

OCCURRENCE - The location in which an event takes place irrespective of the usual residence of persons involved.
